

Qualification of key users for modern DopX software solutions

HOW ICARUS ENABLES USERS TO WORK INDEPENDENTLY THROUGH PRACTICAL TRAINING AFTER IMPLEMENTING DOPX.

To successfully support the introduction of Process Simulate and DopX, comprehensive training was necessary for the employees involved. Initially, the participants only had knowledge of the FANUC RoboGuide software, but they needed to be prepared in a practical way, both in the fundamentals of offline programming with Process Simulate and in specific application cases with DopX.

Objective

- Teaching basic knowledge in process simulation and robot optimization
- Key user training for DopX
- Combination of theoretical content with practical exercises
- Application to real project topics

Proceed

- Provision of structured training materials
- Demonstration of exemplary processes
- Exercises on the participants' own computers
- Integration of real project examples for direct applicability

Result

- Participants were successfully qualified
- Confident handling of DopX and Process Simulate
- Practical preparation for everyday project work

"The training exceeded our expectations - especially the practical relevance and direct application to project topics were extremely helpful."
