

## 1. Topic: Introduction to CEE Simulation (Cyclic Event Evaluation)

The basic knowledge about the structure of line simulation studies (continuous simulation) in Process Simulate is conveyed by means of an example project.

You will get to know the necessary functions, resources and viewers within Process Simulate to extend a given study to a CEE study (line simulation).

**For:**

All those who want to get started or further educate themselves in working with Process Simulate in Line Simulation Mode.

**Prerequisites:**

Basic knowledge of Process Simulate, knowledge of robots is an advantage.

**Learning goals:**

Become familiar with the functions required to create a Line Simulation study. Creating and using sensors, programming modules and logic blocks. Define the material flow in the study and control the component occurrence.
