

1. Topic: Plant Simulation basic seminar

Functional basics and introduction to simulation with Plant Simulation using a project example. You will learn the structure and process of a simulation model in Plant Simulation using an example model. The functionality of the modules is discussed and the knowledge gained is put into practice in practical exercises.

For:

All those who want to start working on projects with Plant Simulation.

Prerequisites:

No special previous knowledge required.

Learning goals:

You can independently create simulation models and answer typical questions when planning production plants. Can I achieve the required number of pieces per day? How much personnel is required? Is a forklift truck sufficient?
