

Who needs it?

Offline programmers who use Process Simulate to create and document their work in the areas of welding, painting, sealing and glueing.

Your goal

Why are my waveforms uneven?

How can I quickly, easily, and as accurately as possible extract and monitor TCP speeds in Process Simulate?

Our solution

SpeedWave

SpeedWave records the actual TCP speed and displays it on a speed-versus-time graph in relation to the specified target speed. This makes it very easy to identify speed fluctuations during the application.

SpeedWave

Analysis of the TCP Speed Curve
